2011 CES - The Egg Chair Returns

Las Vegas, Nevada, January 6, 2011 – Acousticom Corporation returns to International CES with a LED video display attachment to their 5.1 Sound Egg Chair. Acousticom, located in CES Booth #5321, is demonstrating the full capabilities of the audio chair during the CES event.

Doug Cochran, Vice President, states: “After the overwhelming popularity of the Sound Egg’s debut at last year’s International Consumer Electronics Show, We are proud to be bringing the egg chair back for another fully featured tour at the 2011 CES show.”

The innovative chair provides an unforgettable audio experience for the person seated inside. With a 5.1 surrounding speaker system, a 10” subwoofer, and custom configuration options, the Sound Egg provides one of the highest audio quality experiences in combination with a plush foam exterior available in a variety of colors. Sitting inside this egg allows the individual to completely forget about his or her responsibilities and simply enjoy the richly accented and deeply powerful sounds of an expertly configured audio system.

The Sound Egg is the brainchild of the president of Acousticom, Mark Cochran. The company has specifically designed its products to meet its overarching goal of providing a refuge from the stresses of daily living in an increasingly frenetic world. Technology products in particular have often been focused on pure function without taking into account the needs of the humans interacting with those products. By taking time to carefully consider how individuals prefer to use technology while simultaneously creating an environment in which they can relax and feel comfortable, Acousticom has pioneered a field of technological development that has gained tremendous attention at both the CES show and in the industry at large.

As both an audio chair and gaming chair, the Sound Egg chair allows users to become completely immersed in their choice pursuit, creating a powerful and much needed respite from the stress of their daily lives. During last year’s CES show, participants noted how quickly the outside environment seemed to diminish, and the corresponding richness of their experience inside the chair. The foam design compliments virtually any body type or personal height, and can be finished in a color that matches a pre-selected interior décor scheme.

The Sound Egg chair, which made its debut at CES in Las Vegas in January 2010, is the latest in a long line of innovative products by Acousticom Corporation. Acousticom was founded by Ben and Jean Cochran in October of 1980; the company recently celebrated its 30th year in business. During those thirty years, Acousticom has produced topnotch microphones, earphones, cable assemblies and headsets. Their customers include many major aerospace companies and the Department of Defense. A series of exciting changes – especially the debut of the Sound Egg audio chair – have recently brought Acousticom back into the limelight.
